We have been running our Risk & Return seminars for the last 6 years. Every year we tour the country and deliver the latest information on ACC, health and safety, workplace claims, and general business risk.

This year of course it is a little different, for two reasons. The first, and most obvious, the global pandemic of Covid-19 and the uncertainty with which it entails has made us a little wary of booking physical venues. So we, like many businesses are pivoting and taking the seminars online, AKA webinars. The good side is you will not have to travel or even get dressed to attend. The bad side, we will certainly miss the personal interaction and meeting new people. Nonetheless we figured this information is too important not to share and the show must go on, albeit in a digital form.

The second difference is the proceeds from sales will go to Mates in Construction, a suicide prevention charity set up to aid those in the construction industry. Because now more than ever is a good time to support our fellow kiwis in maintaining mental health. You can check out Mates here:

<http://www.mates.net.nz/>

Last but not least, we have over \$12k worth of giveaways (free stuff!) from the good people at Pracmed NZ, n3 and Manual Handling NZ.
